Multidisciplinary Perspectives on Dementia and Population Health Trends

Due: October 1, 2023

The TRENDS Network at the University of Michigan seeks manuscripts on the topic of **dementia and population health trends** for an upcoming Supplemental Issue in the Medical Sciences section of the Journal of Gerontology: Series A. We are interested in research from a broad array of scientific disciplines including those within public health, the social sciences, and the clinical sciences.

Several priority areas have been identified:

1. Leveraging of national health surveys (e.g., HRS, NHATS) or large-scale electronic health records/medical claims to understand trends in dementia or dementia care in the United States
2. International comparisons of dementia or dementia care trends
3. COVID-19 and dementia or dementia care trends
4. Interrelations between changing family demography and future care for older adults with dementia.

The deadline for manuscripts is **October 1, 2023**. Authors will submit their manuscript through the Journal's ScholarOne submission website <https://mc.manuscriptcentral.com/jgms>. Submission of a manuscript does not guarantee the manuscript will be accepted for publication. Authors wishing to validate interest in a manuscript for this Special Issue may email a title and abstract to the Guest Editor, Neil Mehta (nemehta@utmb.edu) directly. Questions can also be directed to Neil Mehta.

Authors are advised to carefully read and follow formatting directions detailed in the Author Guidelines for the [Medical Sciences](#) section of *The Journals of Gerontology, Series A*. When selecting manuscript type, select Supplement Article.
